

**MST**<sup>TM</sup>  
multi-spectral targets<sup>TM</sup>

# IT'S A FACT - There are more thermal imagers, thermal weapon sights, and thermal surveillance systems in use today than ever before.

## Based on Three Principles: Realism, Modularity & Durability

Targets available: E-type, F-type and 3-D

Power requirements: 12 to 24 volts (AC or DC)

Power cable is adjustable to match atmospheric conditions

Weapon overlays: AK-47, M-16, RPG-7

IR Beacon (night vision) module

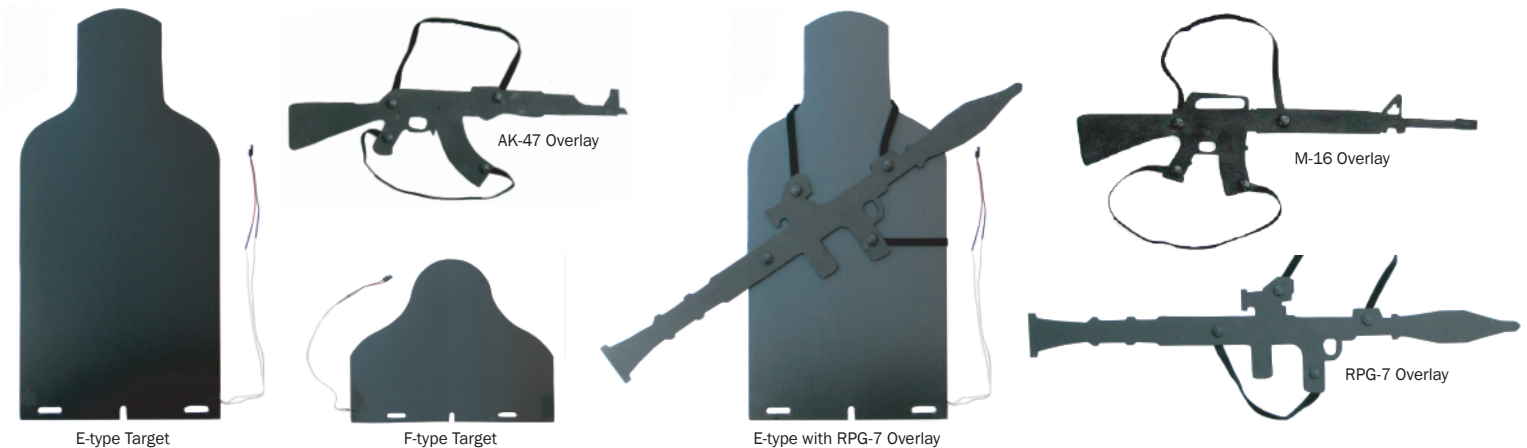

The MST family of targets is specifically engineered to mimic the thermal signature of people despite variations in temperature.

Fits into most target lifters.

Can use existing range power or military batteries (BA-5590/2590) to enable a field-expedient range or training scenario.
